

01. Real-Time 3D Digital Twin for DevOps & SecOps

Infrastructure security and operations Visualisation.
See. Understand. **Act.**

✓ AWS / Azure / GCP ✓ Kubernetes Native ✓ Zero Trust

KUBE TOWN

02.

Modern infrastructure is **too complex**

- || Cloud, Kubernetes, identities, services, and policies creating massive sprawl
- || Fragmented across multiple tools, dashboards, logs, YAML, and JSON files
- || Reliance on point-in-time scans instead of live, contextual understanding.
- || Heavy reliance on highly specialized experts creates bottlenecks.
- || Result is slow incident response & dangerous misconfiguration

Teams don't lack data, they lack clarity & speed

03. Why existing tools fail to **scale**?

Traditional Tooling

The standard DevOps & SecOps stack

Flat dashboards

2D Grids that fail to show relationships

Static Graphs

Snapshots that expire the moment they render

Alert Overload

Thousands of lines of logs with zero context

High Cognitive Load

Requires extreme mental mapping to understand.

The result

Operational Blindness

Unknown Blast Radius

Impossible to predict impact of a breach or change.

Hard to explain Risk

Security findings are abstract and hard to communicate

Slow & Reactive

Teams spend time deciphering data, not fixing problems.

Hard to train

New engineers take months to build a mental map.

04. What's **KUBETOWN** ?

KubeTown transforms your infrastructure complexity into a living, breathing 3D world

Digital Twin

Static configs become a spatial environment you can explore

Visible

Hidden risks and attack paths light up instantly

Intuitive

Manage complexity through natural spatial interaction

Guided

Move from insight to remediation with clear workflows.

05. Infrastructure as a **3D World**

Translating abstract code into tangible space

Clusters become Districts

Logical boundaries become geographical zones.

Services become Buildings

Microservices stand tall as distinct structures.

Pods become Floors

Individual workloads occupy specific floors

Identities become Avatars

Users and roles become visible as Avatars

Flows become Traffic

Logical boundaries become geographical zones.

Threats as Attack Paths

Vulnerabilities rendered as clear danger zones.

*You don't read security.
You explore it*

06. Product Editions

From individual adoption to enterprise scale

BEST FOR **ENGINEERS**

Local edition

Free / Community

● Rust

📦 WebGL

- ✓ Runs locally (Air-gapped ready)
- ✓ Zero cloud dependency
- ✓ Perfect for learning, testing & dev environments
- ✓ Visualize clusters & basic risks

STRATEGIC GOAL

Frictionless Adoption & Virality

BEST FOR **TEAMS & LARGE ENTERPRISES**

Cloud Edition

Enterprise SaaS

🎮 Unreal 5

🔧 Houdini

- ✓ Real-time monitoring & historical playback
- ✓ Multi-cloud & SecOps connectors
- ✓ Collaboration, RBAC & reporting
- ✓ Enterprise compliance & SSO

STRATEGIC GOAL

Operational Efficiency & Revenue

07. Benefits for DevOps teams

Shift from abstract configuration management to tangible infrastructure operations.

Instant Understanding

Grasp complex systems immediately through spatial visualization.

Visual Dependencies

See how services connect and rely on each other in real-time

Spot Misconfigurations

Identify drift and errors visually before they cause outages.

Rapid Onboarding

Reduce ramp-up time for new engineers from months to days

Visual Debugging

Troubleshoot incidents contextually, not just via log scrolling.

Gamified Exploration

Replace guesswork with interactive system discovery.

DevOps moves faster with fewer specialists.

KUBE TOWN

08. Benefits for SecOps teams

Shift from reactive alerts to proactive, continuous security visibility.

Real-Time Posture

Monitor live security status continuously, not just periodic snapshots.

Visual Attack Paths

See lateral movement possibilities and threats before they escalate.

Clear Blast Radius

Instantly understand the potential impact of any compromised asset.

Visible Identity Risks

Make complex IAM permissions and identity risks immediately visible

Easier Triage

Prioritize incidents faster with intuitive visual context and data.

Executive Communication

Translate technical risks into visual stories for leadership

Security becomes proactive & continuous

09. **Real-Time**, Not ~~Point-In-Time~~

Why continuous visibility is the only way to secure modern infrastructure.

Traditional Approach

Periodic Scans

Snapshots taken every 24-48 hours

Static Reports

Outdated CSVs and PDF exports

Delayed Response

Reacting to yesterday's problems

KUBETOWN Approach

● Live

Continuous Monitoring

Live visibility into every change

Always-Up-To-Date Twin

Infrastructure reflects reality instantly.

Immediate Visualization

See misconfigurations as they happen

If it moves, you see it!

Workflow Integration

09. Actionable by design

Turning 3D visibility into immediate operational outcomes.

01. INSIGHT

Visual Anomaly

Red pulsing entity detected in production district

02. KUBETOWN ENGINE

Guided Remediation

Port 22 exposed to public internet on payment-service-1

AutoFix Apply Network Policy

View Apply Network Policy

Create Jira Ticket (JIRA-1024)

Direct Deep Links • Reduced Cognitive Effort • Workflow Integration

03. OUTCOME

Security

Risk eliminated without context switching.

*From insight
to action in
one flow.*

KUBE TOWN

10. Why Gamification Matters

Leveraging human cognitive strengths to master infrastructure complexity.

FACTOR 1

Spatial Understanding

Humans evolved to navigate 3D space, not scan thousands of lines of code. We process spatial data 60,000 times faster than text.

FACTOR 2

Visual Metaphors

Districts, buildings, and traffic flows render abstract complexity into intuitive concepts, drastically reducing cognitive load.

FACTOR 3

Faster Learning Curves

News engineers can “Walk” through the infrastructure and understand architecture in minutes instead of weeks of processing documentation.

FACTOR 4

Lower Dependency

Eliminates the “Hero Engineer” bottleneck. Knowledge is embedded in the visualization, not locked in one person’s head.

FACTOR 5

Inclusive Teams

Visual interfaces bridge skill gaps and language barriers, allowing diverse team members to contribute effectively.

*Gamification is
not play. It’s
efficiency*

KUBE TOWN

11.

Who is it for?

Empowering teams across the entire infrastructure lifecycle.

DevOps Teams

Manage complex, sprawling infrastructure where traditional dashboards fail to provide context.

SecOps Teams

Fighting alert fatigue and needing to visualize attack vectors and blast radius instantly

Cloud-Native Orgs

Companies built on Kubernetes and microservices requiring deep, dynamic visibility

Enterprises

Organizations facing skill shortages who need to upskill teams without massive training costs.

Consultants & MSPs

Security auditors and managed service providers delivering high-value assessments.

Zero Trust Adopters

Teams implementing strict identity and network policies that need visual verification.

KUBE TOWN

12. Maximizing Business Value

Bridging the gap between technical operations & strategic goals.

For Organizations

Operational efficiency & risk reduction

-  Faster incident response times
-  Lower operational risk profile
-  Reduced training & onboarding costs
-  Better overall security posture
-  Stronger compliance visibility

For Leadership

Strategic clarity & governance

-  Clear risk communication
-  Visual reporting for stakeholders
-  Confident decision-making

Turn infrastructure from a cost center into a strategic asset.

13.

Why Now?

Leveraging human cognitive strengths to master infrastructure complexity.

PROBLEM

Cloud Complexity

Infrastructure sprawl has exploded. Mental models can no longer keep up with the scale of microservices and multi-cloud.

STANDARD

Kubernetes Everywhere

K8s standardization provides a unified API to visualize modern infrastructure stacks instantly, regardless of the provider.

TALENT

Skill Shortages

Millions of unfilled security roles mean teams must be more efficient and accessible to non-expert.

THREAT

Real-Time Threats

Attackers move laterally in minutes. Static daily scans are obsolete; live, continuous visibility is mandatory

TECH

3D SaaS Enablement

Modern browsers (WebGPU) and powerful consumer GPUs enable professional-grade 3D visualization directly in the browser

*The
Timing is
right*

KUBE TOWN

“To become the real-time operating system for infrastructure, where DevOps & SecOps teams see, understand, and secure their environments without needing extreme specialization”

Where infrastructure security comes to life

Digital Twin

Static configs become a spatial environment you can explore

Visible

Hidden risks and attack paths light up instantly

Intuitive

Manage complexity through natural spatial interaction

Guided

Move from insight to remediation with clear workflows.
